Enhanced Oil Recovery

// STAVANGER 2022

ANNUAL EVENT //

21 – 24 Nov

# Development and implementation of bio-nanotracers obtained from agro-industrial waste for application in improved recovery processes in the hydrocarbon industry

*Camilo A. Franco, M.A., Ph.D.*

Grupo de investigación en Fenómenos de Superficie – Michael Polanyi. Facultad de Minas. Universidad Nacional de Colombia – Sede Medellín

Enhanced Oil Recovery

**Info**

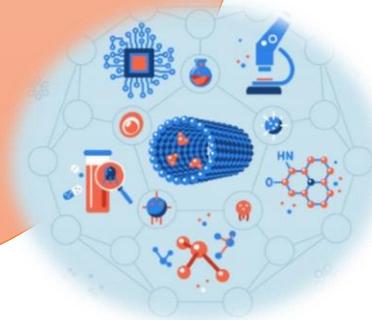

**Bio**

**Convergence**

**Cogno**

**Nano**

***Nanotechnology** is a crucial player in the fourth industrial revolution as part of convergent technologies, alongside **biotechnology, information technology, and cognitive science** that will lead humanity once more to break barriers and address challenges, reducing the gap of what we can do and the way to do it responsibly.*

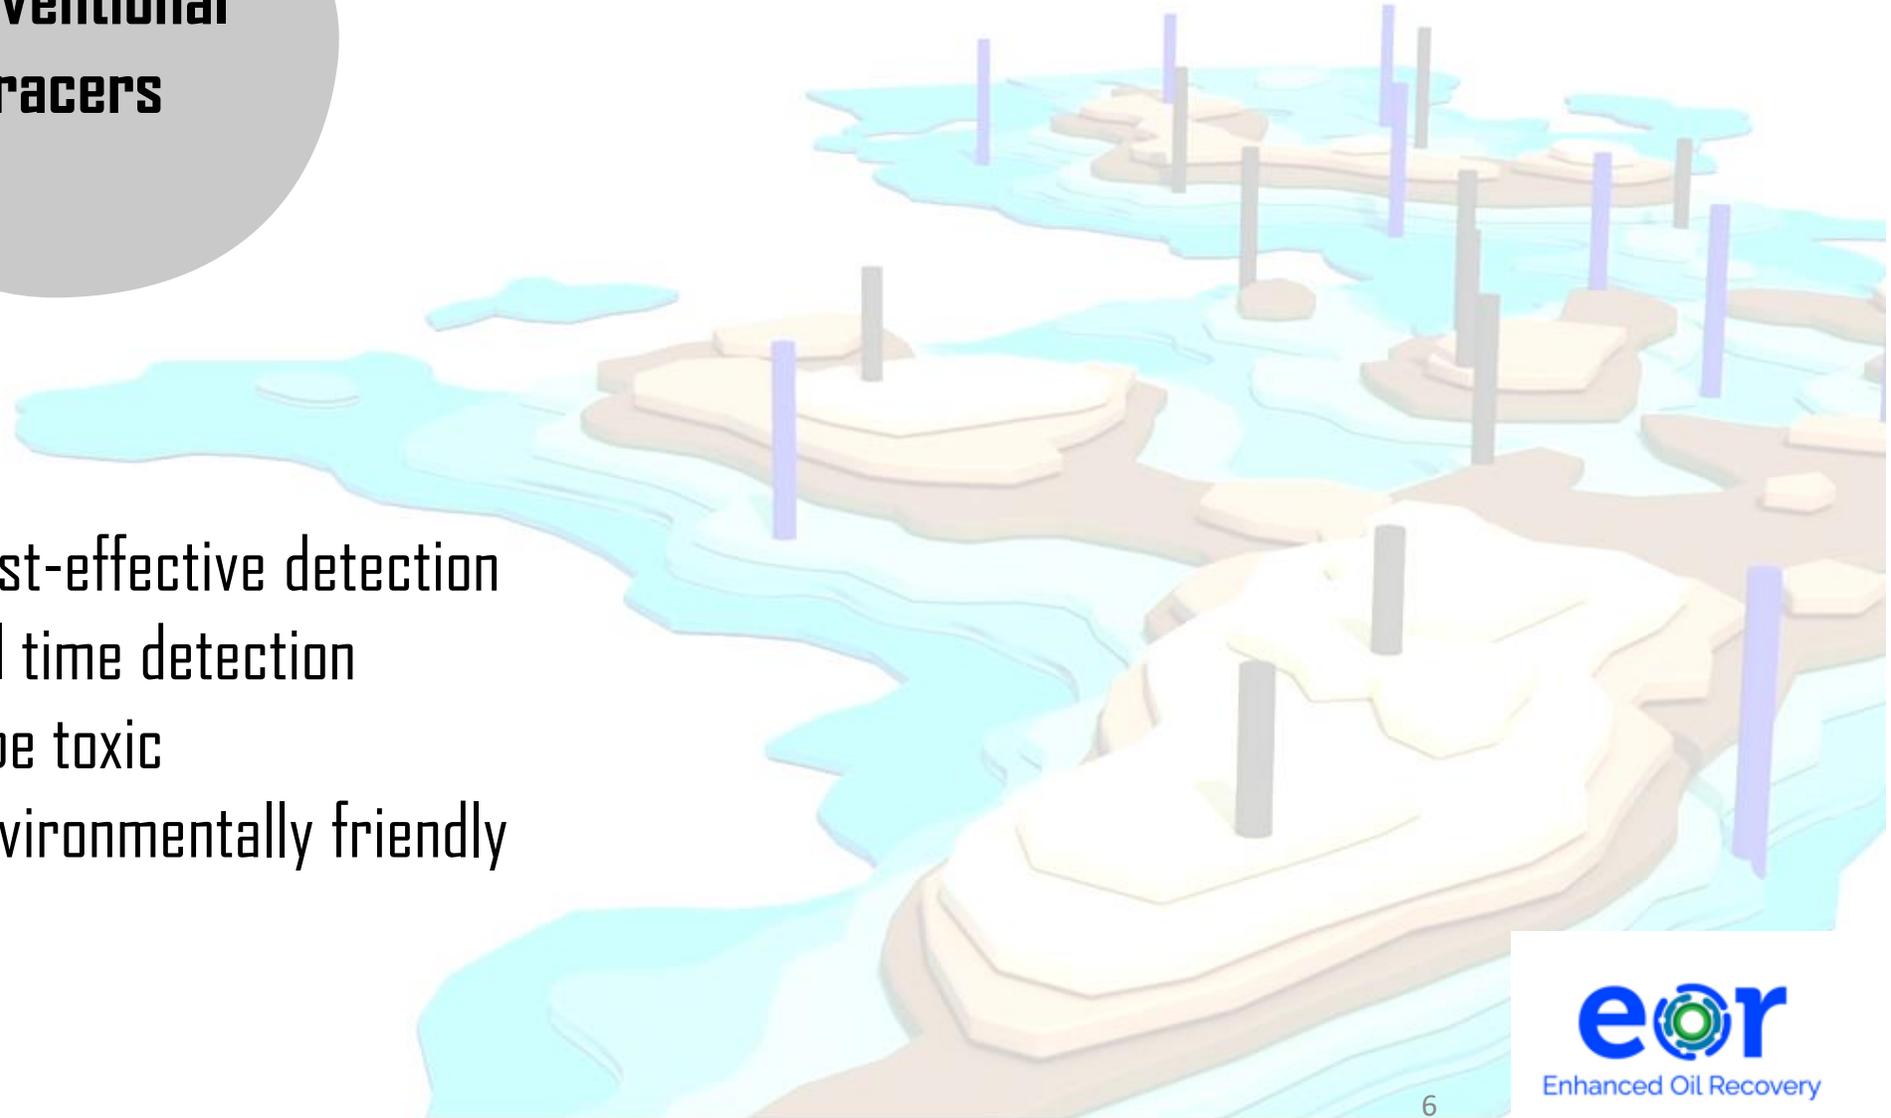

***Nanotechnology** is a crucial player in the fourth industrial revolution as part of convergent technologies, alongside **biotechnology, information technology, and cognitive science** that will lead humanity once more to break barriers and address challenges, reducing the gap of what we can do and the way to do it responsibly.*

**What about tracers?**

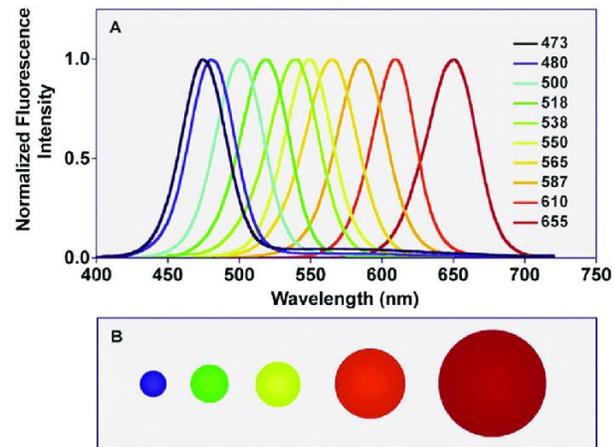

## Conventional tracers

- Non cost-effective detection
- No real time detection
- Could be toxic
- Non environmentally friendly

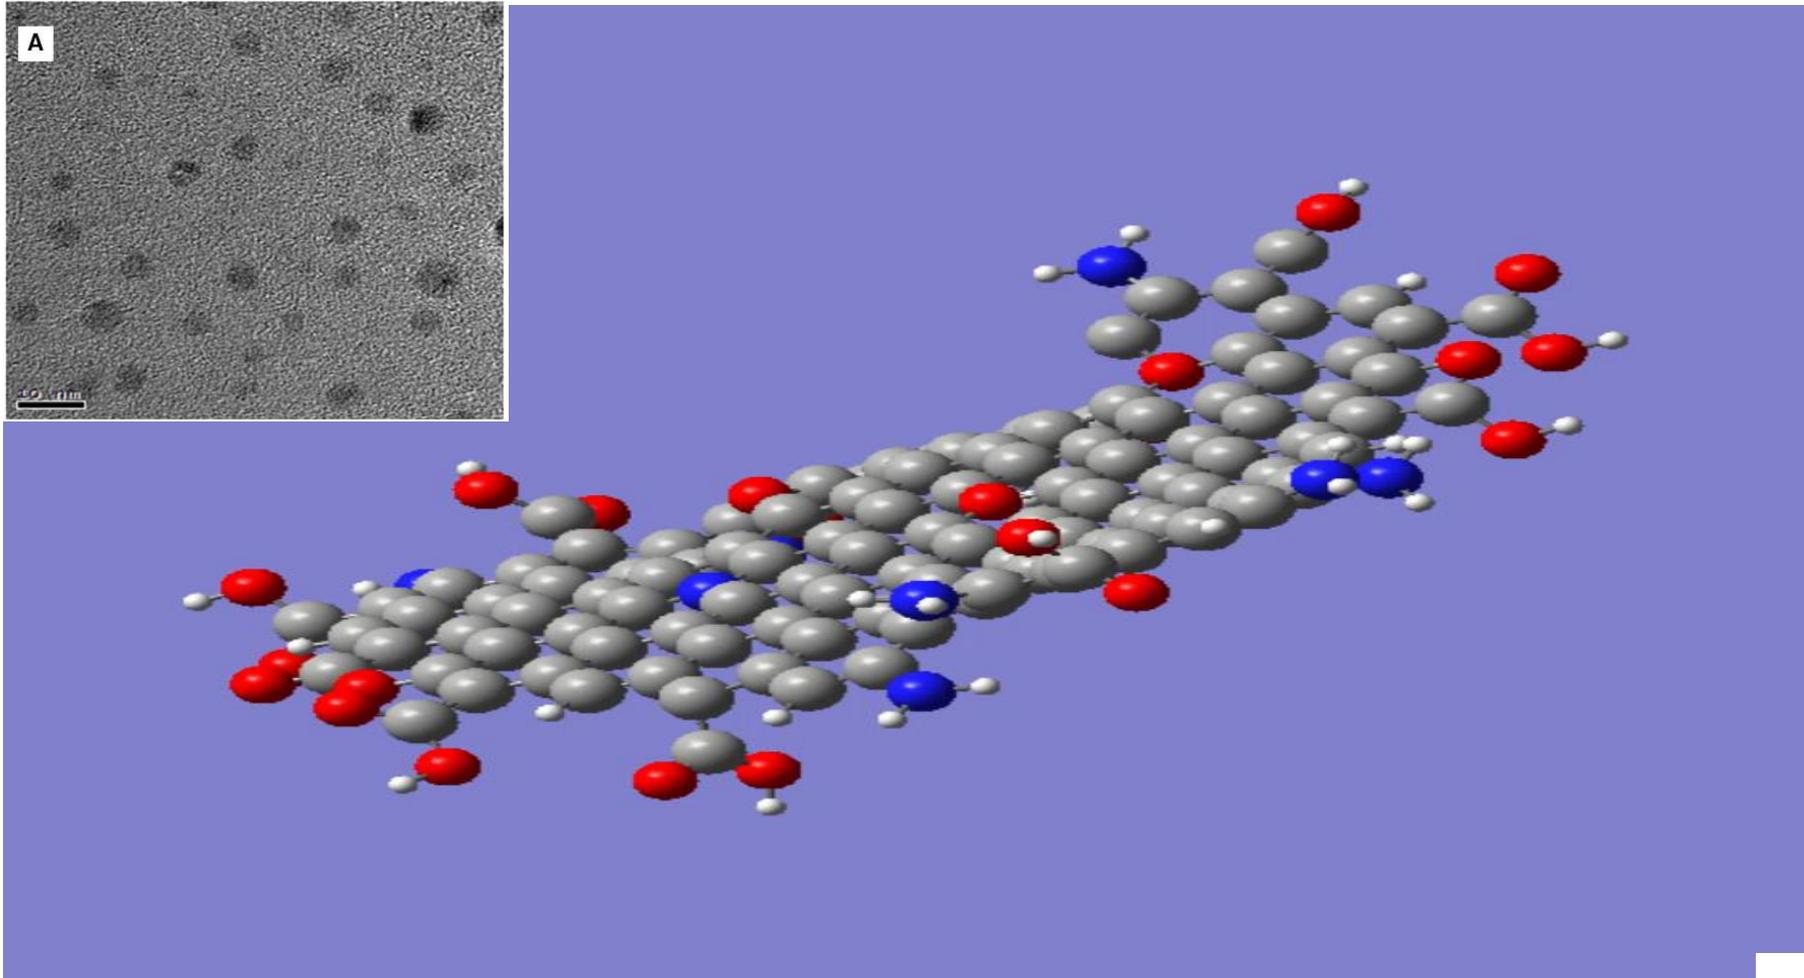

# Quantum dots

Girma, W. M., Fahmi, M. Z., Permadi, A., Abate, M. A., & Chang, J. Y. (2017). Synthetic strategies and biomedical applications of I–III–VI ternary quantum dots. *Journal of Materials Chemistry B*, 5(31), 6193–6216.

# Quantum dots

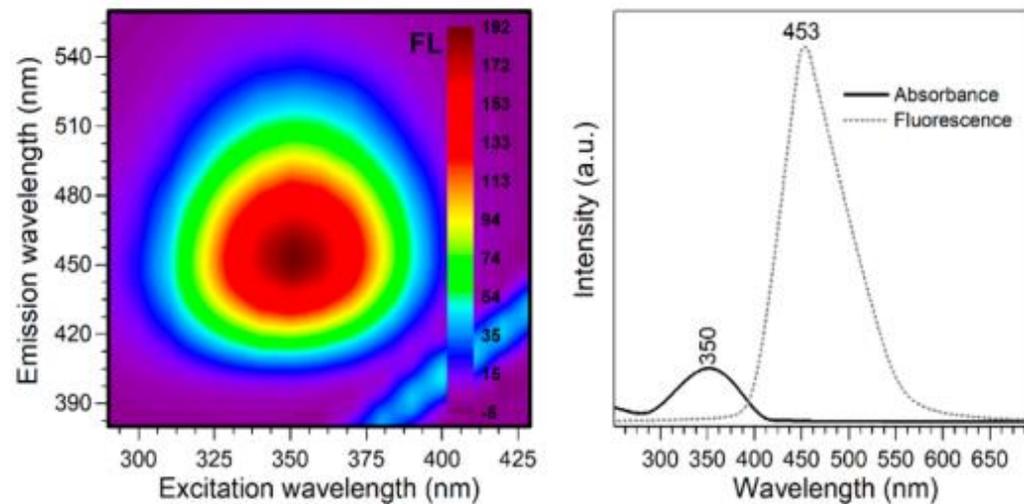

# Quantum dots

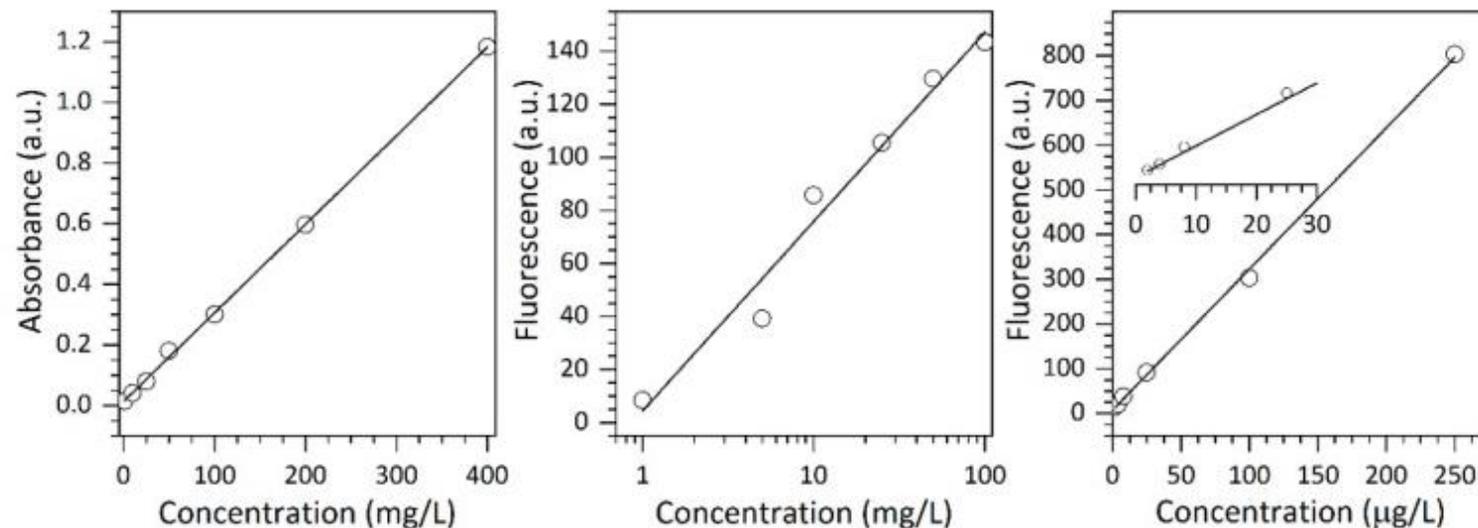

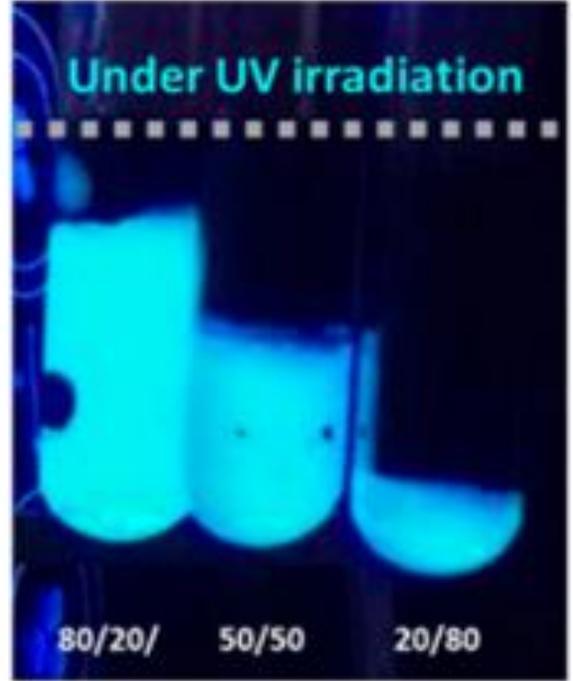

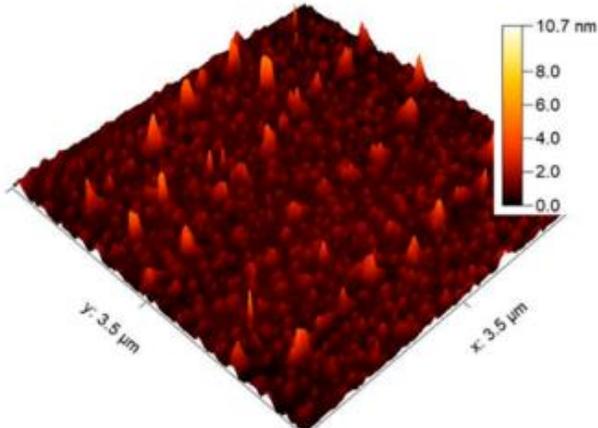

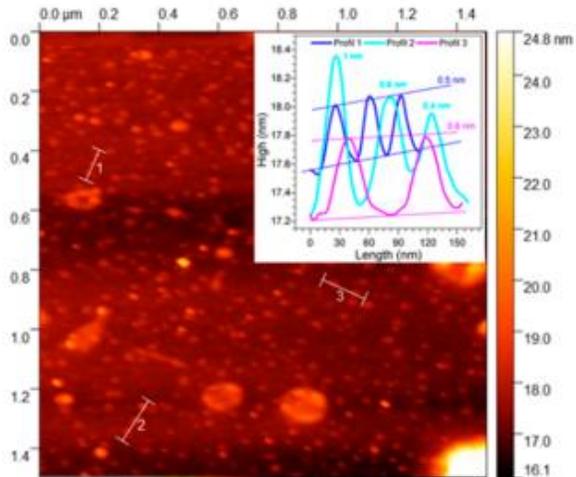

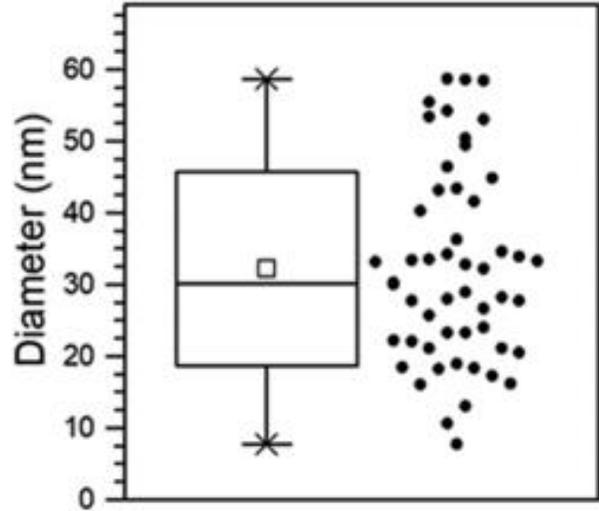

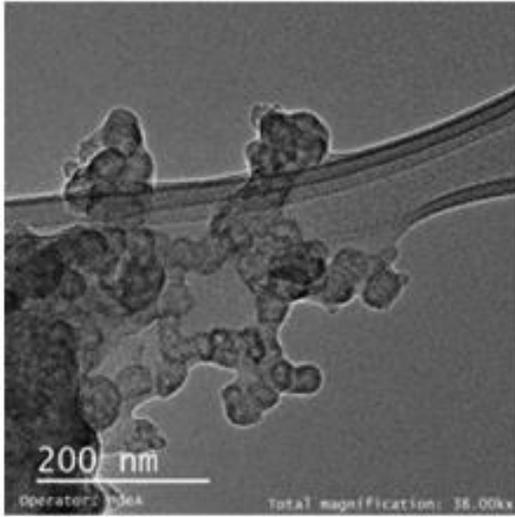

a)

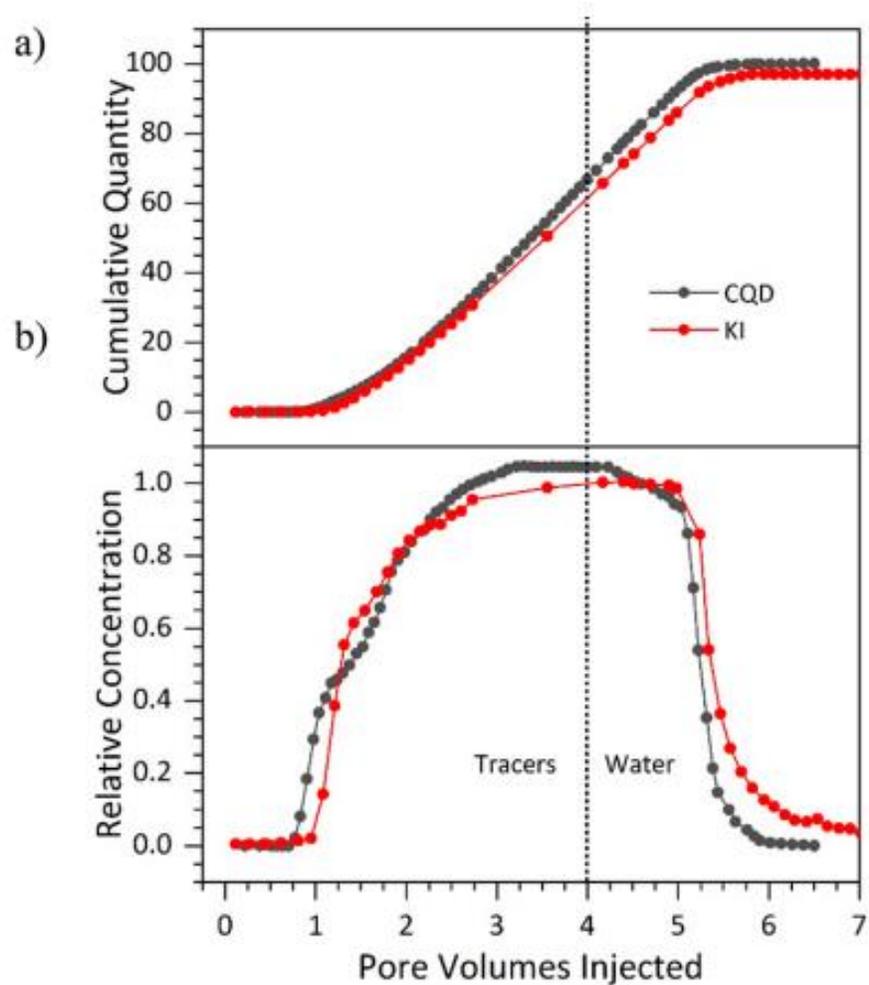

b)

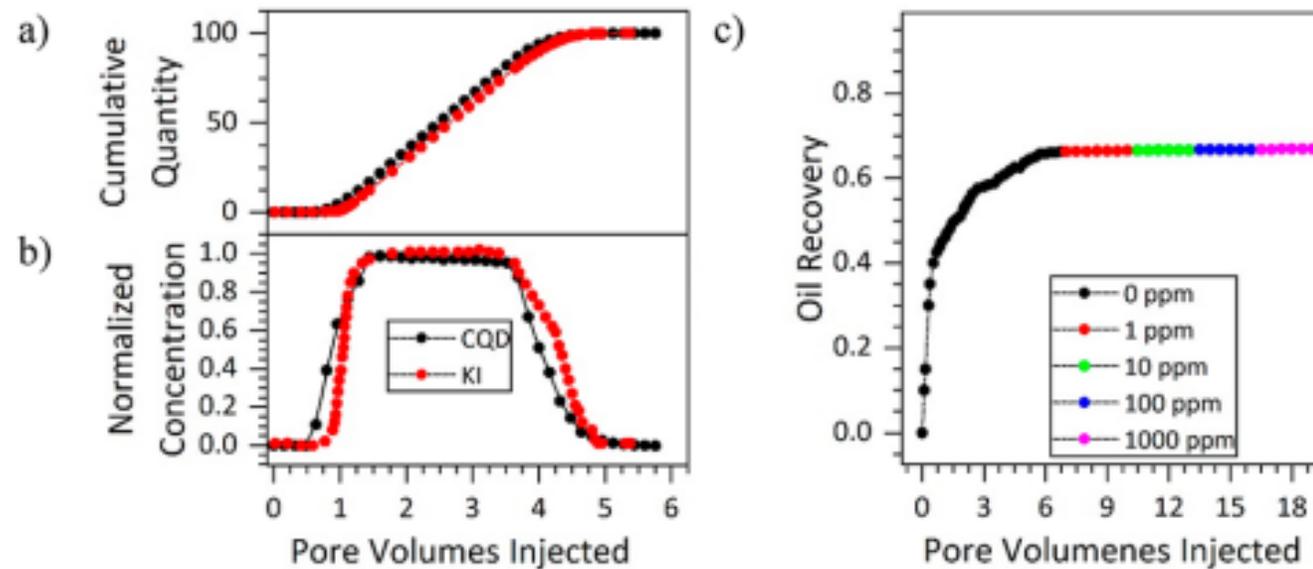

**Figure 2.** (a) 3D fluorescence spectrum as a function of the excitation wavelength (left), and the absorption and fluorescence spectra at a 350 nm excitation wavelength (right). (b) (left) Absorbance calibration curve, (middle) fluorescence calibration curve at 1% of detector attenuation, and (right) fluorescence calibration curve without attenuation. The fluorescence response was measured at a maximum of 450 nm at a maximum excitation wavelength of 353 nm.

**Figure 10.** (a) Retention profile, and (b) cumulative CQD production in a micromodel using synthetic sea sand and a  $100 \text{ mg L}^{-1}$  concentration of CQDs. Profiles are compared with the retention of KI to secure similar results in traceability processes.

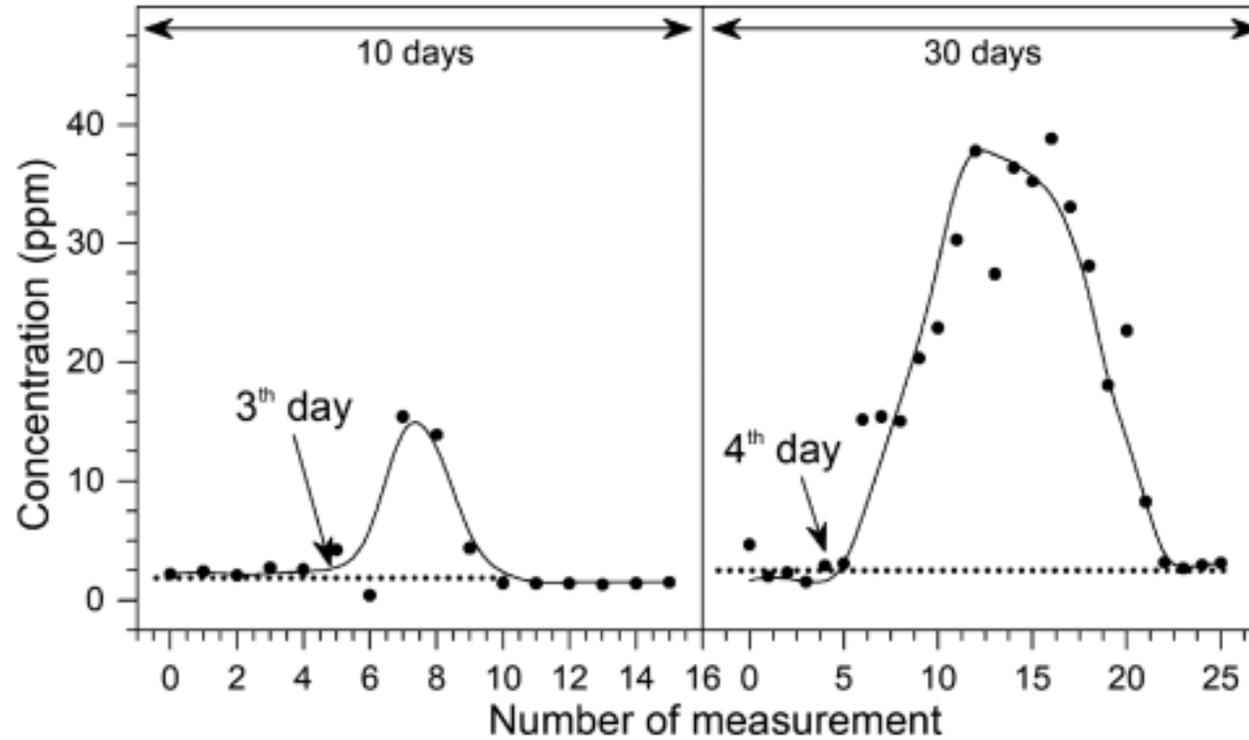

**Figure 11.** Displacement results for CQDs in a Colombian field core at field pressure and temperature conditions: (a) retention profile, (b) cumulative CQD production, and (c) oil recovery results. A  $100 \text{ mg L}^{-1}$  CQDs dispersion in injection brine was used. Profiles are compared with the retention of KI to secure similar results in traceability processes.

**Injection**

**Production**

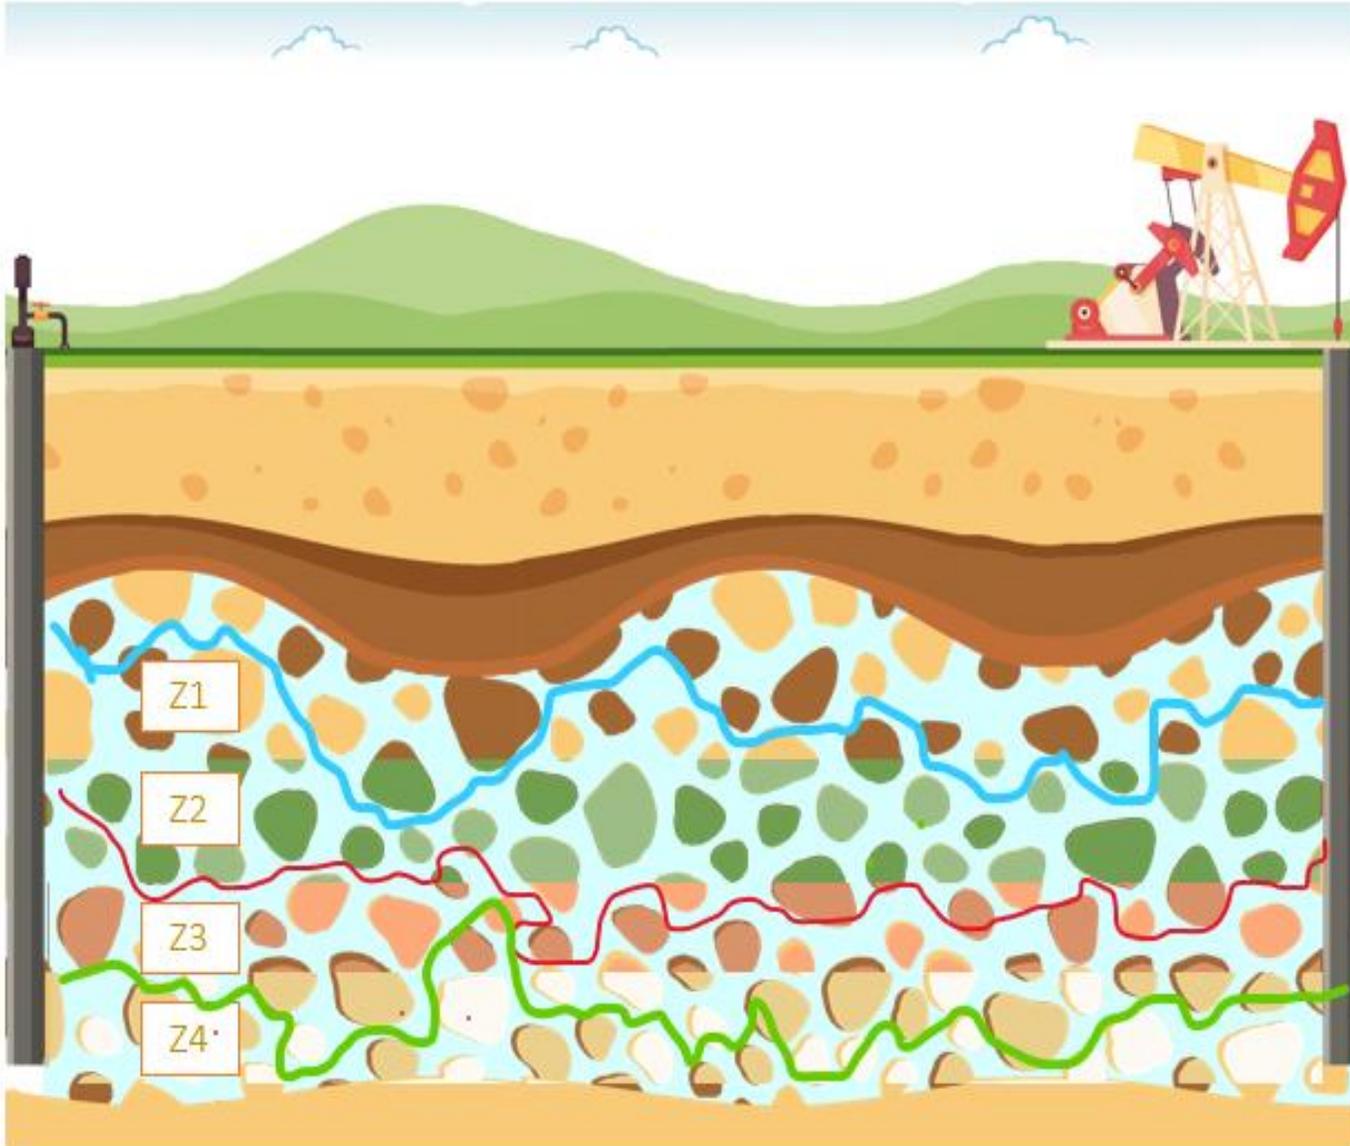

# Field trial

**Figure 12.** CQDs tracer test in a Colombian field during a conventional waterflooding operation. The concentration of the CQDs at the producer wells is a function of time. The CQDs were injected as a concentrated ( $500\,000\text{ mg L}^{-1}$ ) batch.

**The expansion of this technology covers > 10 fields by 2022**

# Multi tracer injection

- There is the need of using several tracers for different zones of interest.
- Another need is related to several injection Wells related to a single producer.

# Multi tracer injection

## Methodology

### Novel synthesis

✓ Sustainable C sources

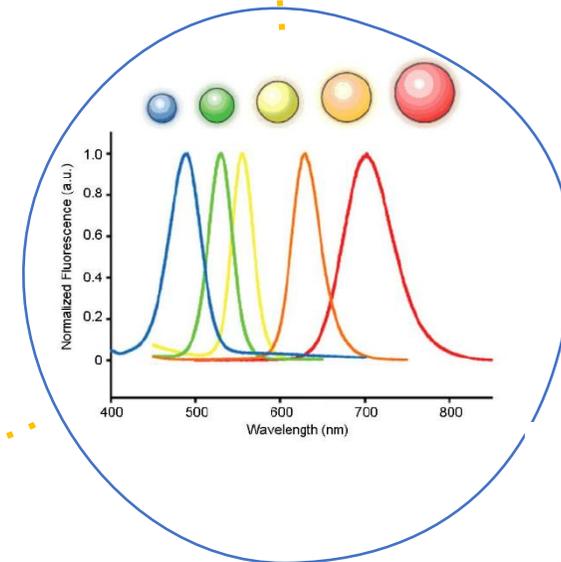

✓ Met. carbonizing

Microwave  
Solvothermal

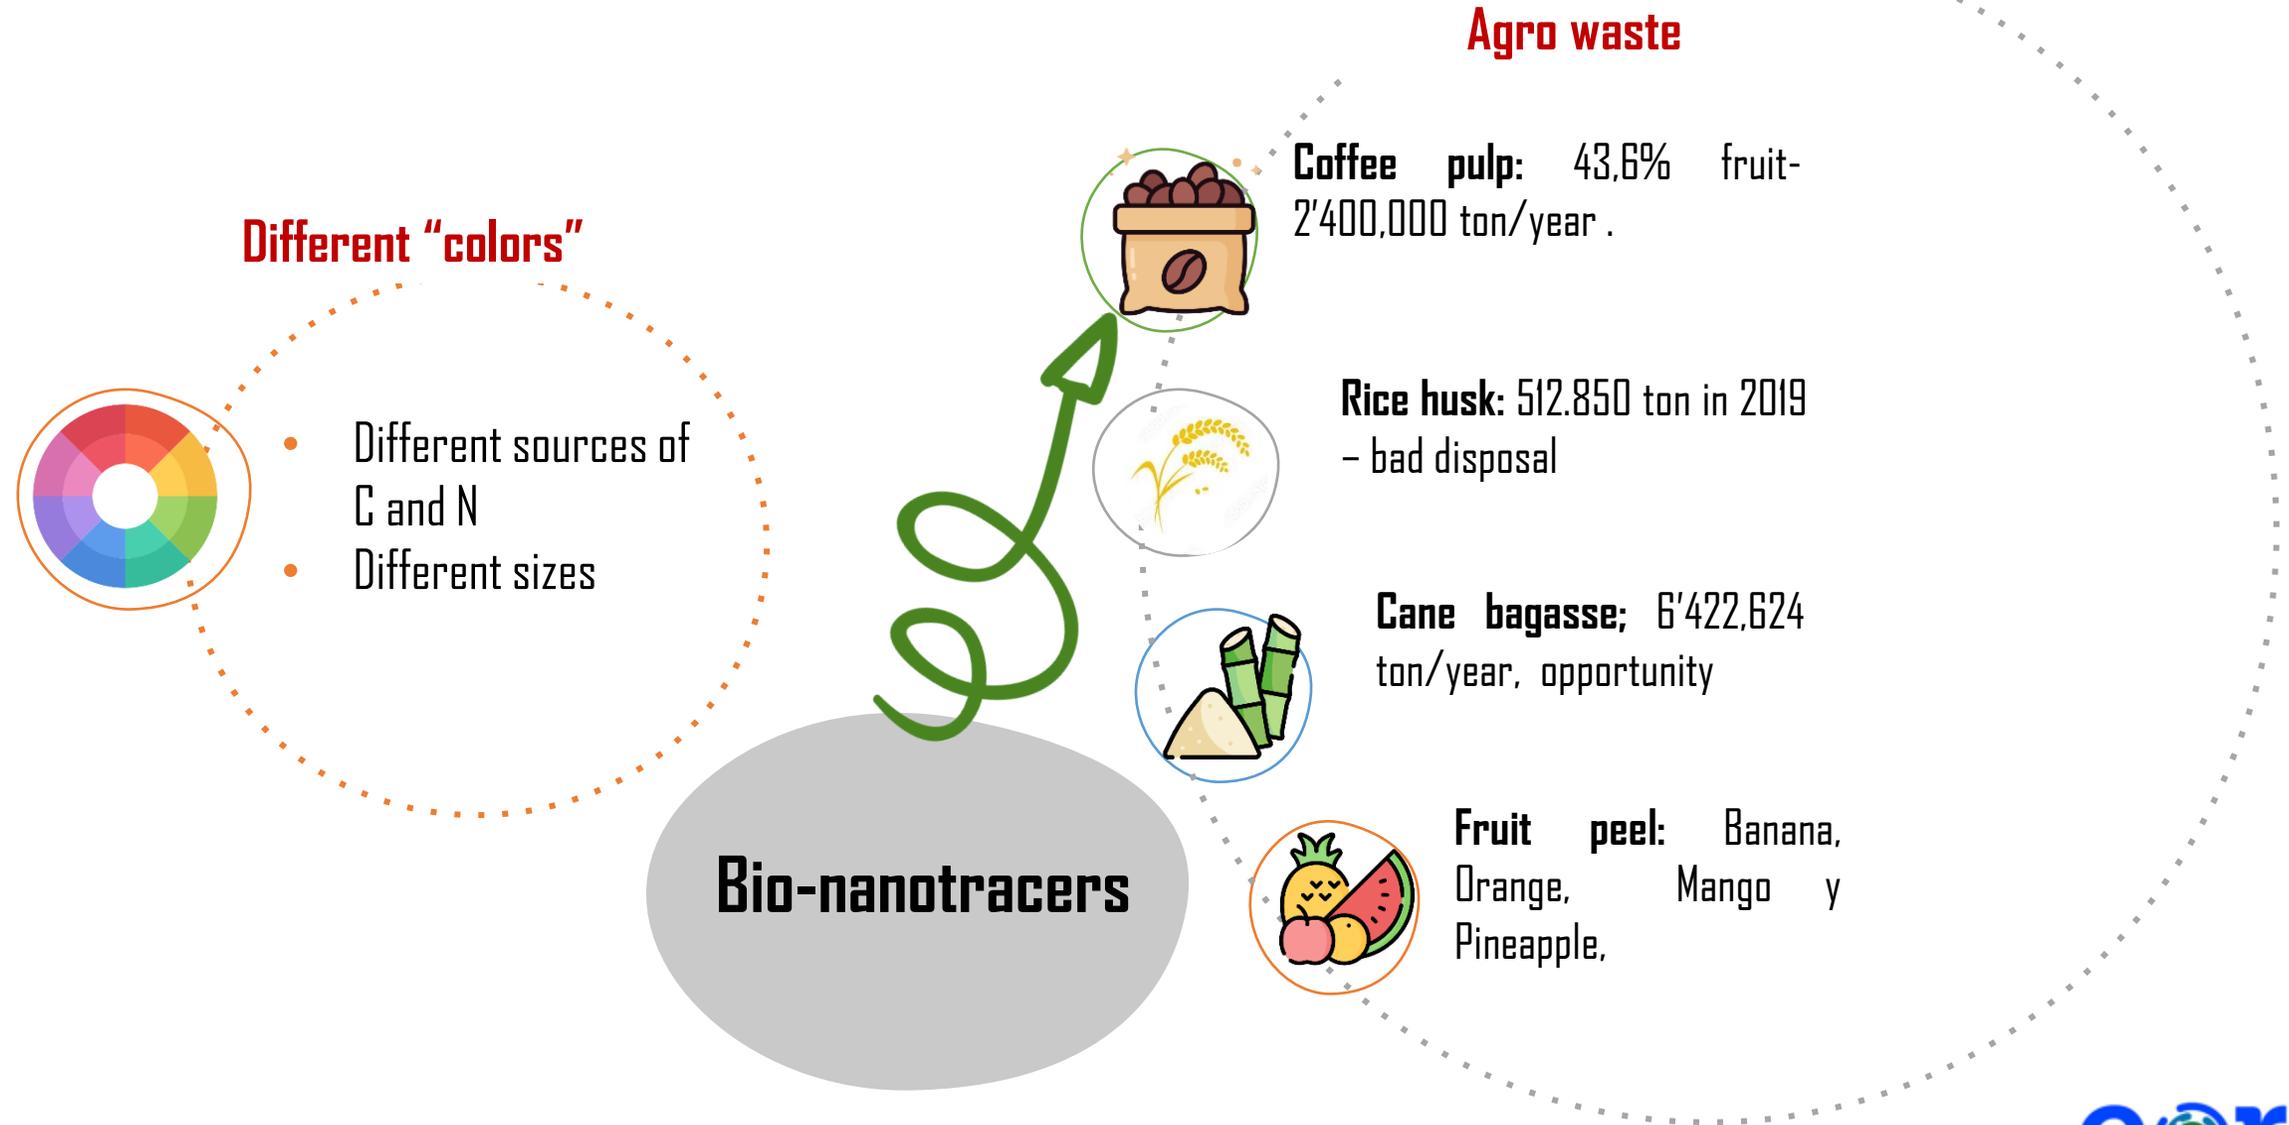

### Surface modification

- N sources (Amine 1, 2 y 3)
- Heteroatoms (O, P, S)
- Transition metals
- Surface oxidation

# Multi tracer injection

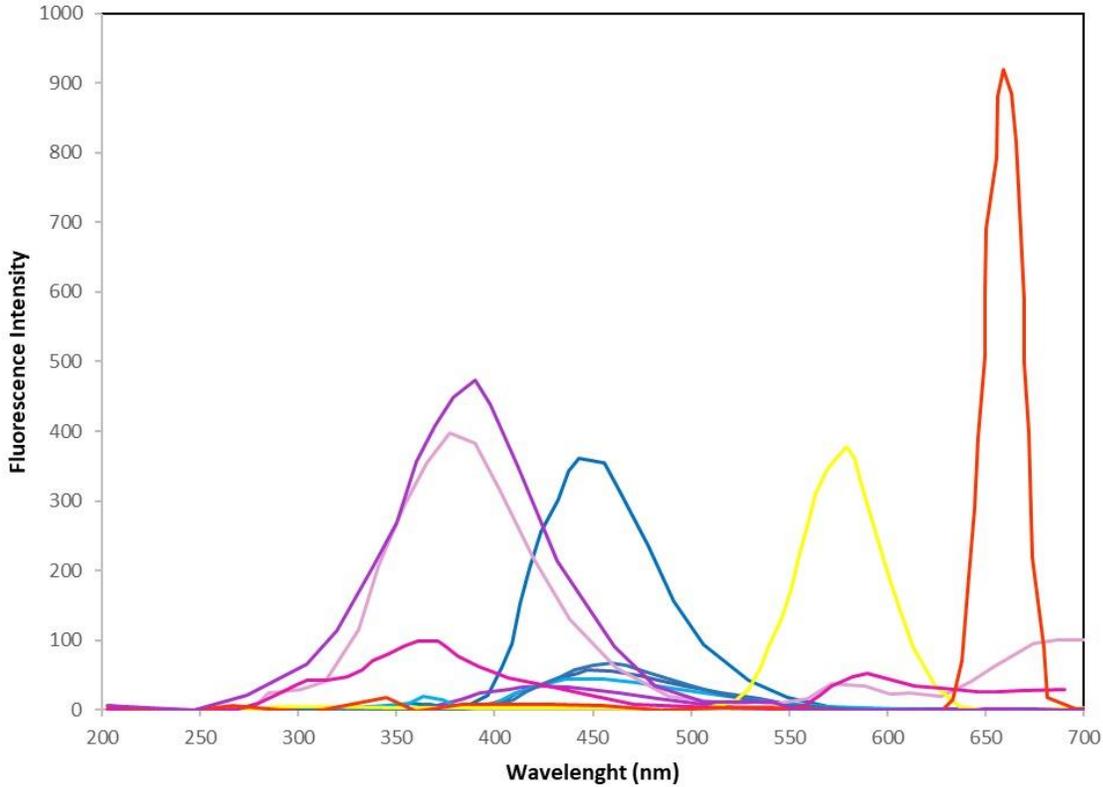

# Multi tracer injection

Excitation	Emission	Color	Method	Solvent
266	454	Blue	Hydrothermal 1	DMF
388	446	Blue	Hydrothermal 1	W
327	412	Violet	Hydrothermal 1	W+Ethylenglicol
390	450	Blue	Electroquimica	W
386	456	Blue	Hydrothermal	Ethanol
270	380	Violet	Hydrothermal 2	W
272	576	Yellow	Hydrothermal 2	Acetone
250	360	Violet	Hydrothermal 2	W
350	650	Red	Hydrothermal 2	DMF
290	385	Violet	Hydrothermal 2	Ethyl Acetate
<b>TOTAL</b>	<b>10</b>	<b>4</b>	<b>2</b>	<b>5</b>

Successful optimization towards to obtain different “colors”

# Multi tracer injection

Successful optimization towards to obtain different “colors”

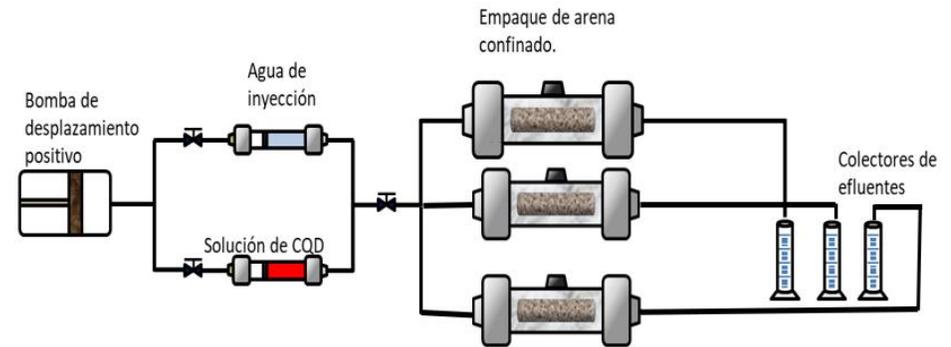

# Static and Dynamic retention

Static

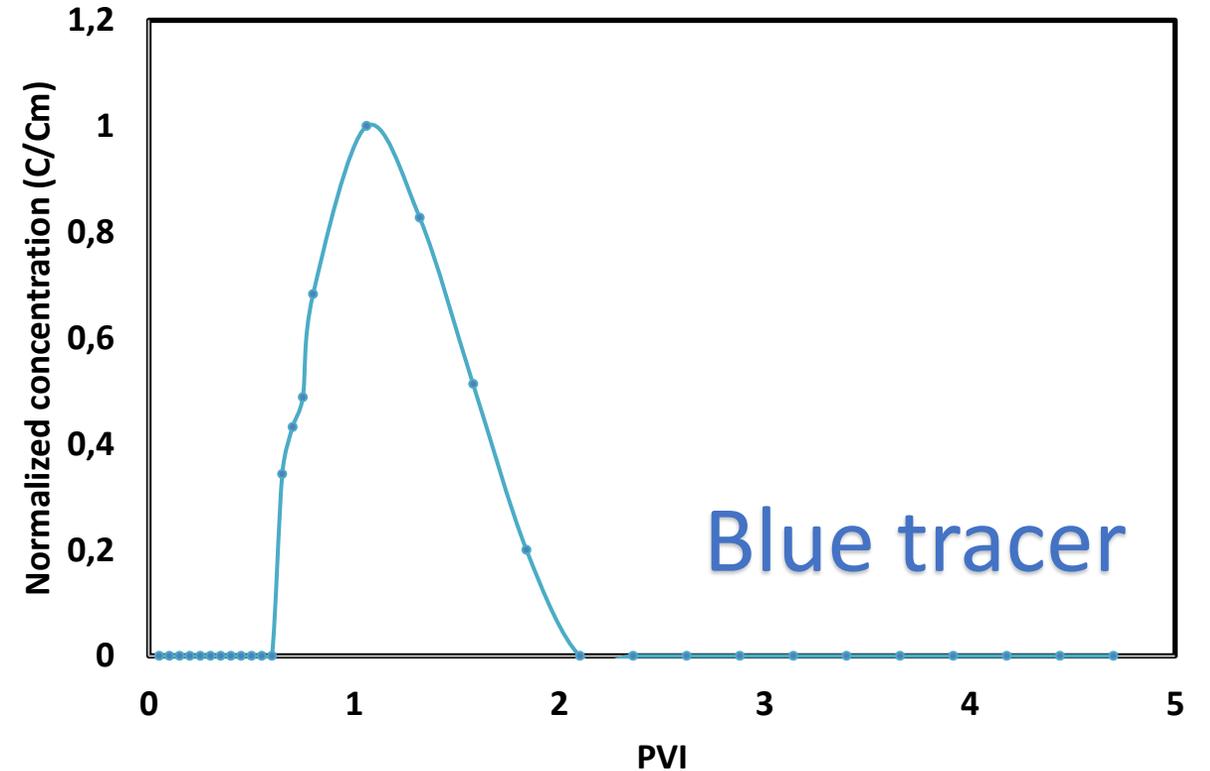

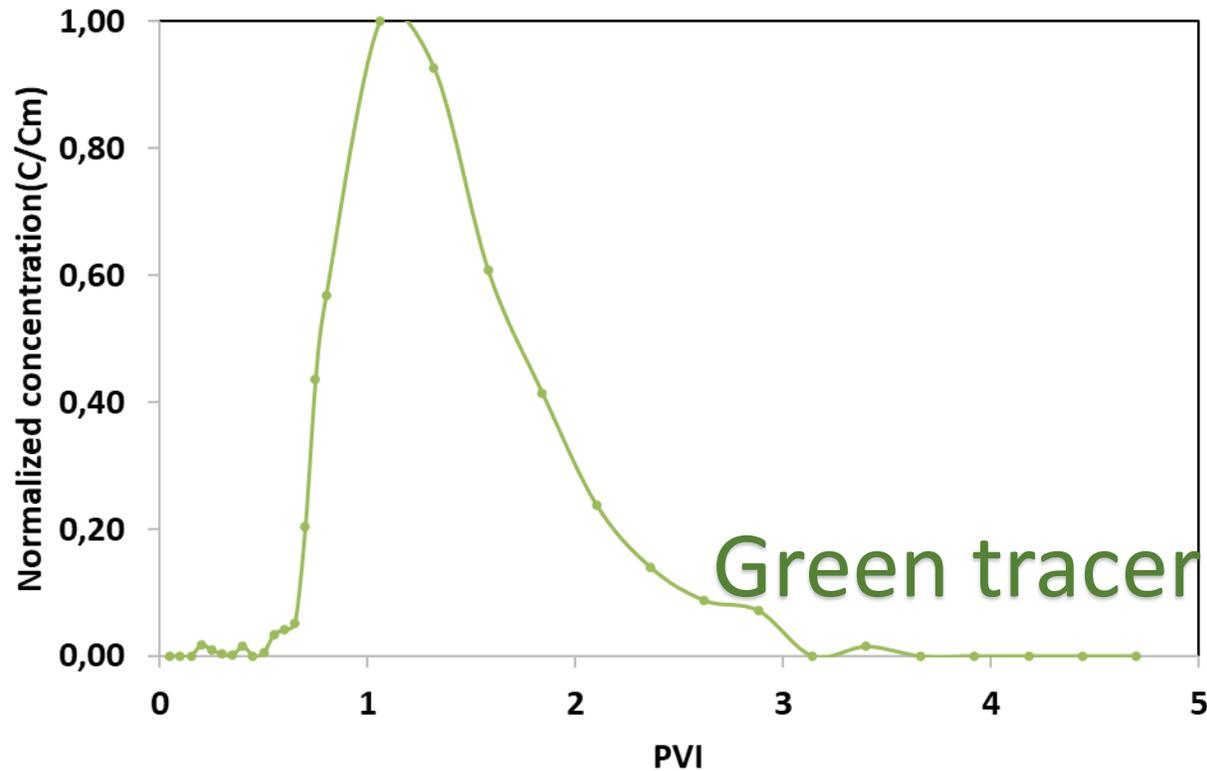

Evaluation under conditions of interest (Stirring, Temperature, among others)

Dynamic

Dynamic evaluation under reservoir conditions

# Static and Dynamic retention

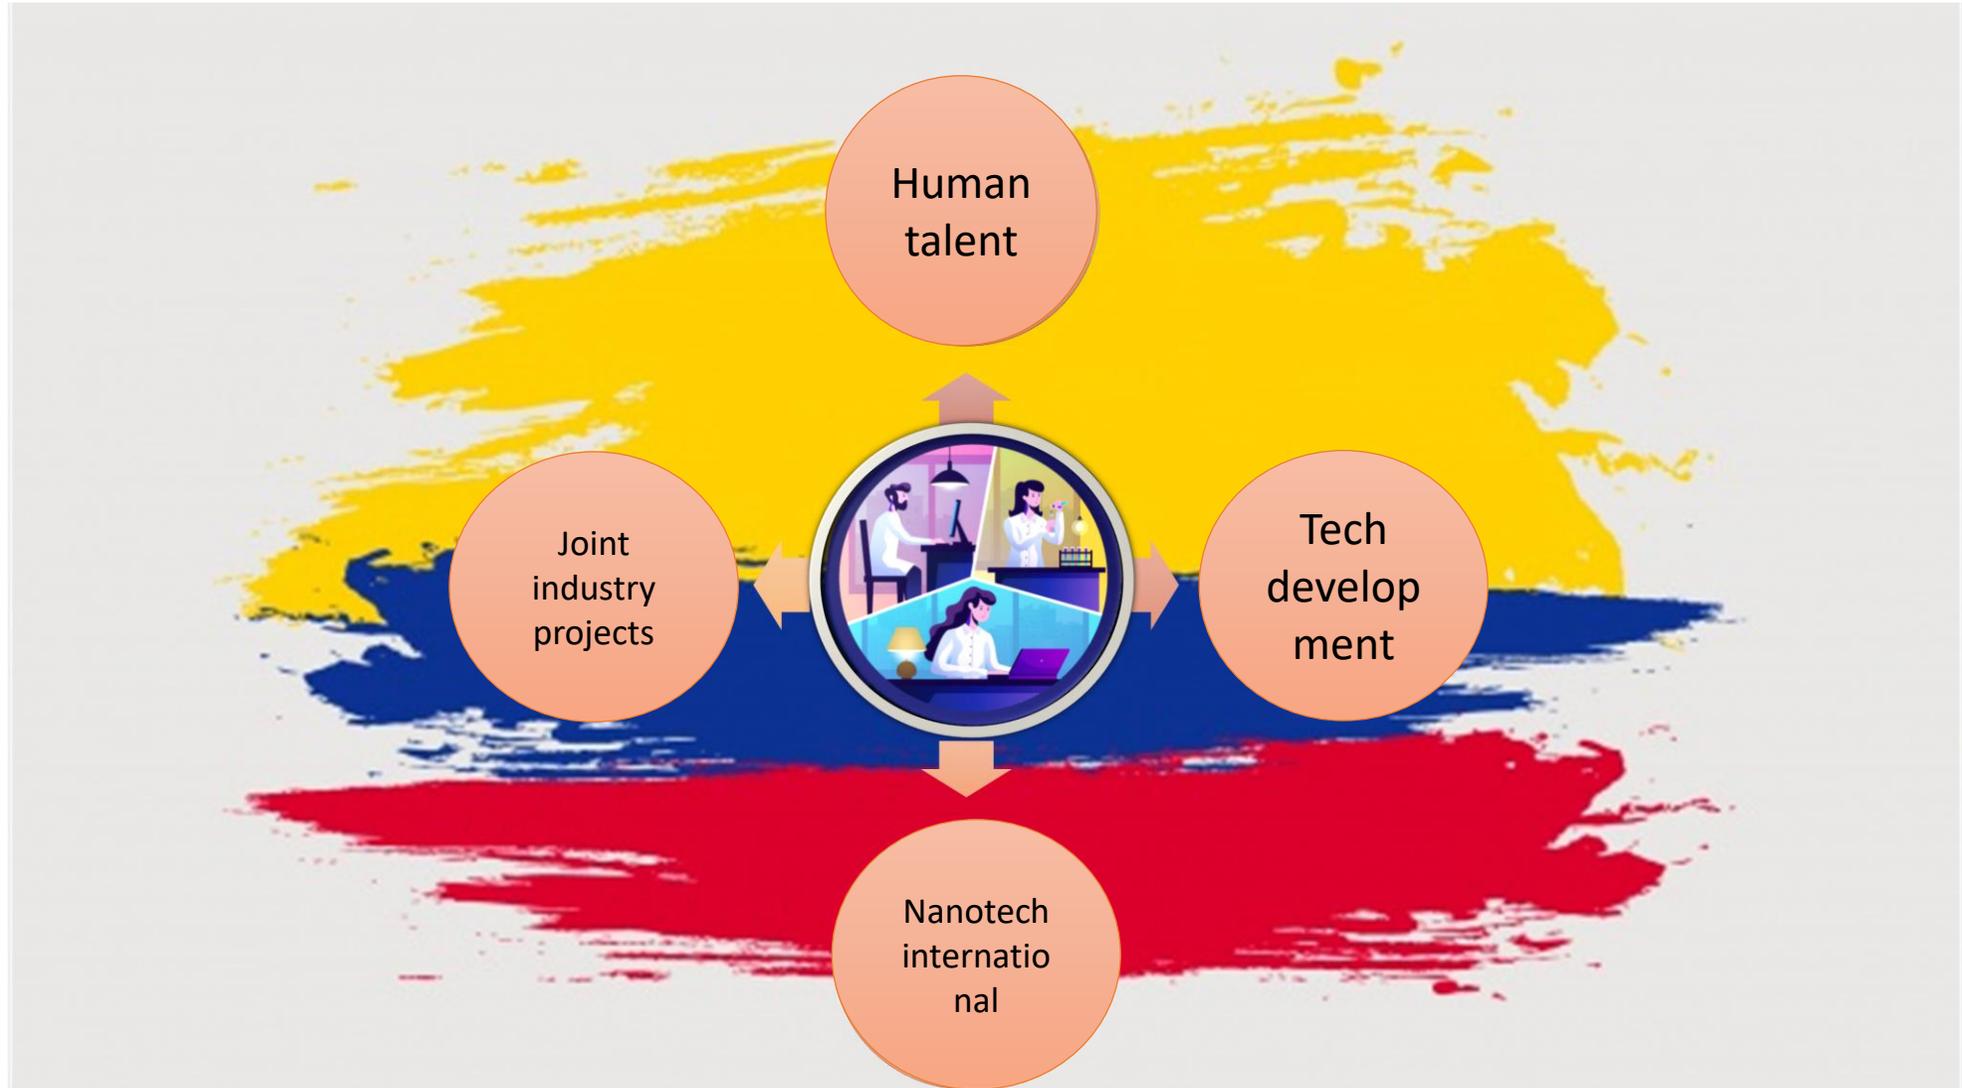

Simultaneous quantification of each tracer

# Scheme injection for field trial

Injection Wells	Production Wells																		
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	
1			Blue CQD						Blue CQD				Blue CQD					Blue CQD	
2	Red CQD	Red CQD													Red CQD				
3	Green CQD		Green CQD																Green CQD
4									Green CQD								Green CQD	Green CQD	
5																			
6			Red CQD										Red CQD						
7		Green CQD																	
8		Blue CQD																	
9				Green CQD	Green CQD								Green CQD						
10					Red CQD	Red CQD	Red CQD								Red CQD				
11								Green CQD		Green CQD	Green CQD								

Information and knowledge about the field are of primary importance
